inFINITE Seating Range

Works whatever the setting

Pure, distinct forms and seamless connections combine to create an approachable piece of statement furniture which is simultaneously modular and integrated.

The Zoefitg name has long been synonymous with innovation and the highest possible quality standards. And this commitment to finding new and better solutions to our clients' project requirements continues to be the foundation for everything we do.

Zoefitg leads the way in the design of seating for terminal market and transport waiting areas, and also offers a full range of products and services for waiting areas in the healthcare, judicial and government markets.

Over the years, Zoefitg's pioneering seating products have revolutionised the industry and can be found in airports, railway stations, bus depots, cruise and ferry terminals and waiting rooms the world over.

The inFINITE range, from Zoefitg, is a groundbreaking airport seating solution that takes design freedom and seating flexibility to new heights.

Calling upon all our specialist expertise, inFINITE is the first truly modular airport seating system. Thanks to a unique award-winning beamless design, it provides limitless reconfigurability enabling the seating to be changed and adapted to reflect the ever-changing needs and demands of the modern airport environment.

inFINITE sets the seating standard in other ways, too. It's the first product in its sector to use a high performance engineered metal replacement composite, a product we call Dura-Z which offers unprecedented levels of durability, comfort and convenience.

Shenzhen Bao'an International Airport - inFINITE custom version

inFINITE is the shape of things to come. Literally.

Our own specially developed Z-form polyurethane takes resilience and durability to new heights, and is ideally suited to meeting the demands of today's modern passenger terminals. It's also exceptionally easy to clean, an important consideration where there's high passenger through-flow.

A high degree of design flexibility, thanks to the huge range of colour options available with polyurethane, goes hand in hand with stylish good looks. The inFINITE range comes in a wide range of stunning finishes including laminated wood and leather upholstery.

It's not just the seats themselves that help make the inFINITE experience so comfortable. The modularity of the system facilitates the easy introduction of tables, allowing passengers easy access to food and drink, while inFINITE is also available with a range of power options so vital for today's busy traveller.

And, of course, for architects, planners, designers, operators and travellers alike, there is all the comfort of knowing you're dealing with Zoeflig – the airport seating market leader and the name behind many of the industry's most innovative solutions.

inFINITE PU

Seating with simplicity at its heart

Simplicity doesn't just happen though...

It takes years of research and the combined efforts of some of the industry's most experienced and knowledgeable designers and engineers to develop a range so simple to assemble, to reconfigure, to replace, to service, to clean and maintain.

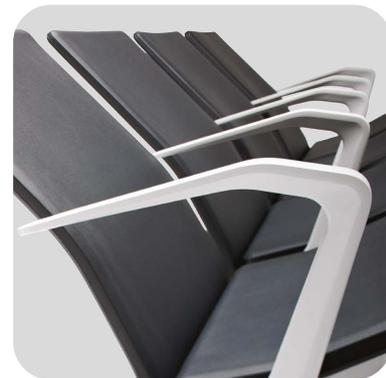

With its unique beamless construction, inFINITE is not only easy to put together in the first place – it's also remarkably simple to transform when your layout needs to be adapted to meet changing requirements, for instance adding arms or tables in locations where they are most needed.

The even spacing of arms and legs and revolutionary design with its minimal footprint, means inFINITE is exceptionally easy to clean. Every last shape, has been carefully designed to avoid dirt traps, speed up maintenance and improve security by offering excellent transparency and uncluttered sightlines.

Last but not least, with its sleek clean contemporary appearance and minimal design, inFINITE isn't just easy to install, adapt and service – it also couldn't be easier on the eye.

inFINITE is a seating system solution that truly lives up to its name.

Because this advanced system offers a range of options that just goes on and on.

With inFINITE, unlike more conventional seating solutions, the beam has been designed out. The first modular system of its kind, inFINITE incorporates a range of standardised elements and completely does away with the notion that a row of seats must be prescribed by its beam length. So, if you want a continuous run of seats running from one end of the airport to the other, inFINITE lets you do it.

More importantly, perhaps, inFINITE allows you to change your layout as the needs of the airport evolve. In fact, such is the versatility and flexibility of inFINITE, that Zoeflig has now patented it for rapid product reconfigurability. With airport waiting areas a fast moving and frequently changing environment, inFINITE enables you to reconfigure the layout quickly and easily, as many times as necessary, whether it's altering the length of rows, adding arms or tables, repositioning seats or converting to cluster arrangements.

The options don't stop there either. Made from Z-Form PU integral skin foam, inFINITE PU comes in any non-metallic colour you specify. It is also available with cold-moulded foam fully upholstered in fabric, leather or vinyls and laminated plywood.

InFINITE Recliner

A new angle on relaxation

You'll never find the design and engineering teams at Zoefftig lying down on the job.

Unless, of course, it was during the testing and research that went into the development of one of our more recent and more innovative seating solutions, the inFINITE Recliner.

It's yet another illustration of how Zoefftig is constantly looking to respond to the requirements of today's air traveller to create a more restful and relaxing airport environment.

inFINITE Arc

Curves in all the right places

inFINITE Arc back to back 20 seat

inFINITE is all about choices.

Choices for the architect, designer, airport planner – and for the passenger.

And one recent design departure that's opened up a whole new world of possibility for passenger waiting areas is inFINITE Arc.

This dynamic seating arrangement marks a significant move away from the straight lines and repetitive monotony of most terminals and offers a refreshingly different design to conventional linear seating layouts.

As well as offering something visually different to the waiting area norm, inFINITE Arc also provides the opportunity to create convivial curved shapes and a pleasant, welcoming ambiance in the airport. Inner and outer curves naturally create both social and more personal spacing.

inFINITE Solo

Each to their own

Not so long ago, if a passenger needed somewhere more private to work or relax, the only real option was to seek refuge in the business lounge.

But that was before inFINITE Solo.

Typical of the innovative solutions for which Zoefitig is renowned throughout the industry, inFINITE Solo provides a dedicated workspace in an ingenious seating cluster configuration.

Equipped with a table and a power supply, and designed to offer the passenger complete privacy, it's the ideal solution for passengers to plug in their laptop and catch up or simply to kick back and relax in peace.

inFINITE Duo

Seating with dual benefits

When it comes to developing dynamic and different seating solutions, Zoefitig knows a thing – or two.

inFINITE Duo is a cleverly designed seating arrangement that provides dedicated space and privacy for two people. With its large central table and optional power supply, it's an ideal solution for two work colleagues travelling together or for couples or partners looking for a little seclusion.

In the airport environment, where continuous runs and endless rows of seats are very much par for the course, inFINITE Duo provides a welcome change as well as an innovative and practical solution.

Seating setting the right example

Corporate and social responsibility

At Zoetig, we are continually developing our manufacturing process and operations in order to minimise their impact on the environment.

As well as offering unprecedented levels of flexibility, inFINITE Duo is a shining example of sustainable production.

The chassis and arms are made from our moulded composite, Dura-Z, and are 100% recyclable. While our Z-form polyurethane seats and backs are 99% recyclable. Moreover, because the injection moulded parts also require no finishing, environmental harm is further reduced.

Even the in-built flexibility of the product itself plays an important sustainability role. Because the modularity and ability to adapt to change extend the lifespan of the product, inFINITE promotes a more environmentally responsible approach to product procurement.

Aside to the specific environmental benefits of inFINITE, Zoetig has an overriding environmental commitment embodied in the Corporate and Social Responsibility (CSR) policy that sits at the heart of our business. This encompasses three main areas:

- **Environment** – we are constantly exploring how to minimise the environmental impacts of our products and operations through increased product longevity, better materials, more sustainable designs and manufacturing processes and improved waste management
- **People** – we value our people enormously and are committed to their development, fostering an environment where independent and creative thought is encouraged, and where staff have the opportunity to build on their skills
- **Community** – as well as financial aid for local charities, we are looking to the future by developing award-winning links with the local community, including local universities and participation in the Knowledge Transfer Partnership.
