

Case study

Hong Kong International Airport T2 Expansion

Hong Kong International Airport T2 Expansion

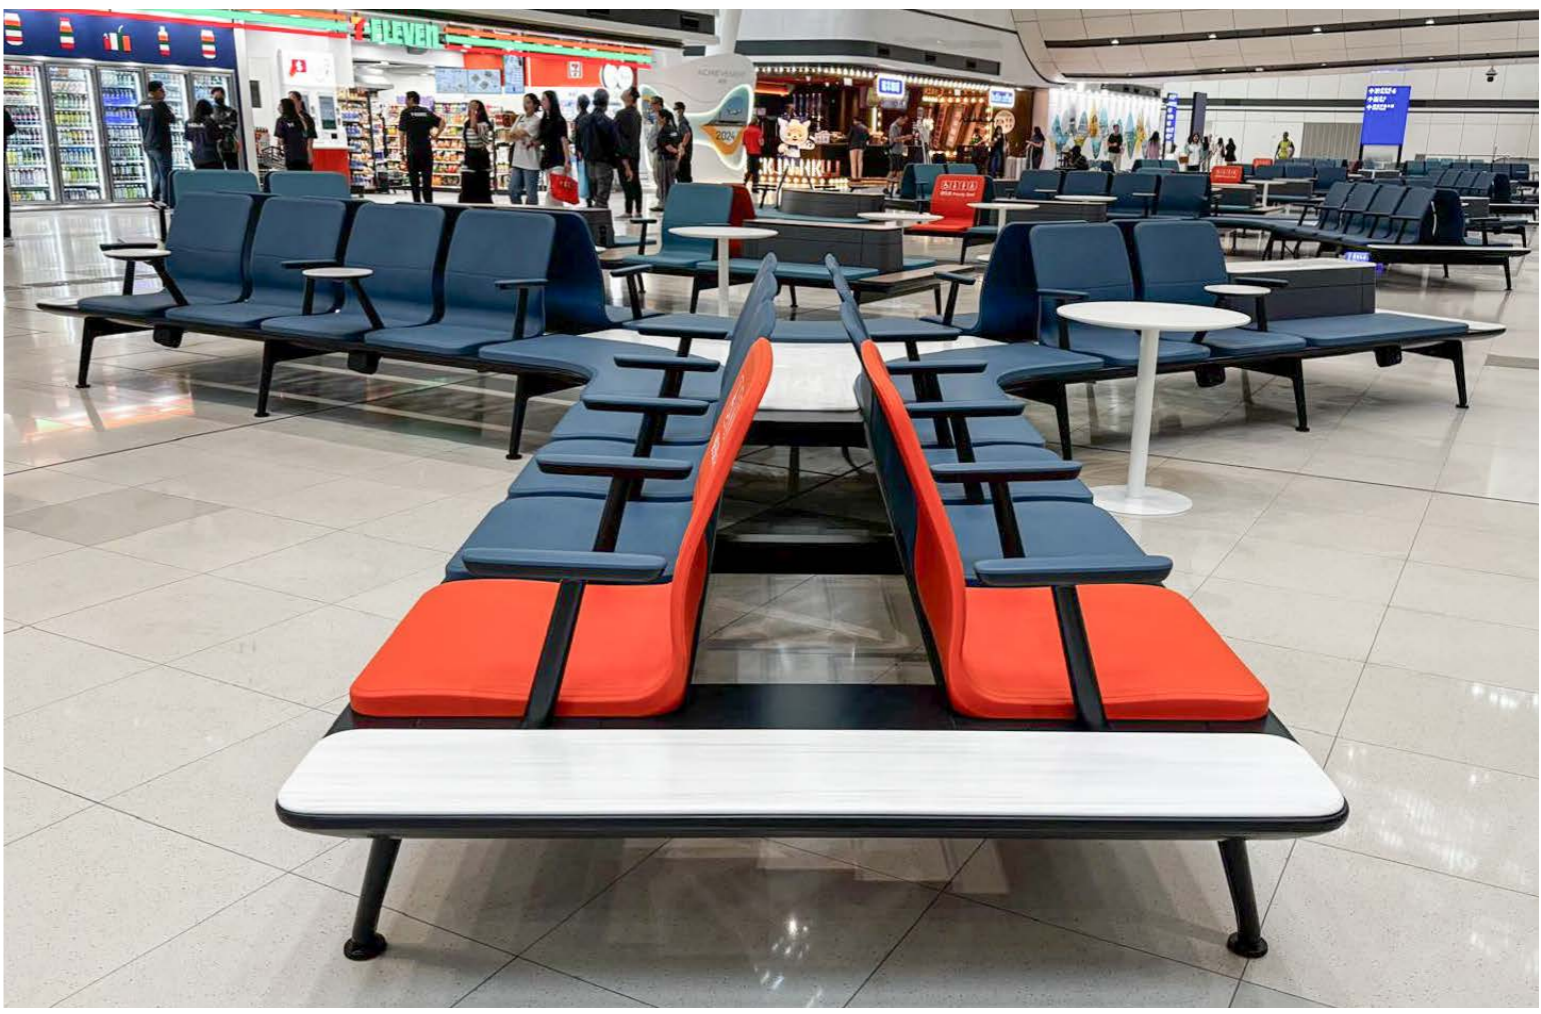

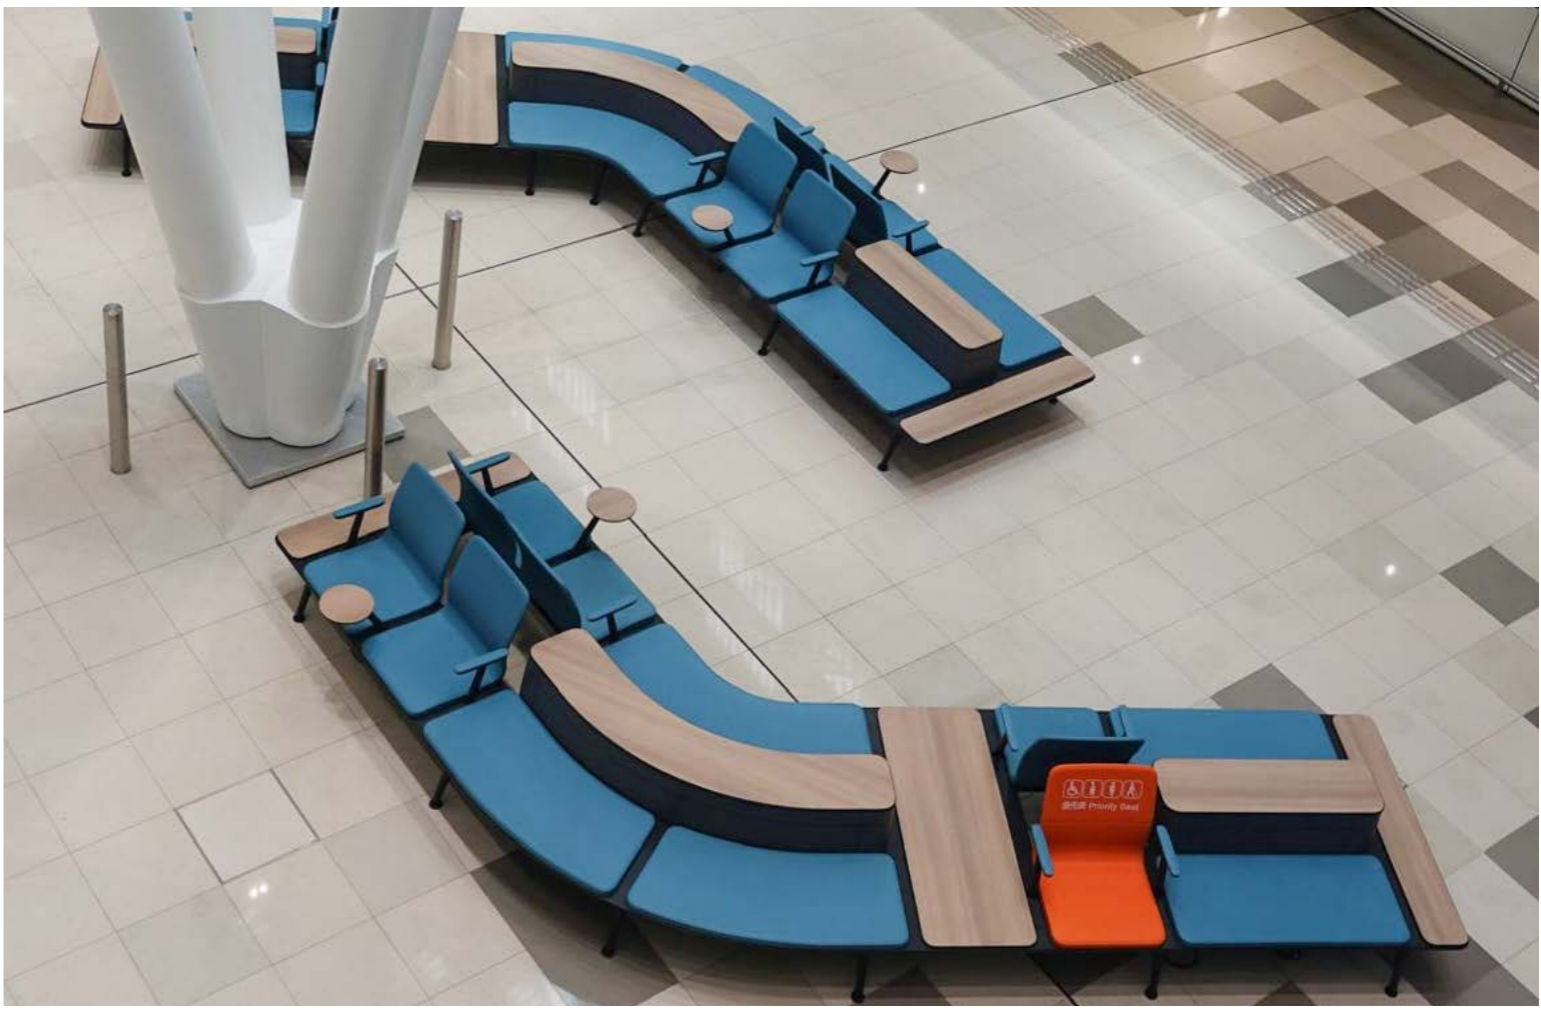

The new T2 Expansion spans four floors and accommodates 1,961 fully powered seats, each equipped with USB charging and power sockets, enabling passengers to remain connected, productive, and comfortable throughout their journey. The widespread availability of power reduces congestion around charging points and supports the needs of today's digitally reliant travellers.

A total of 22 bespoke PU seating configurations have been developed to respond to different passenger behaviours and dwell times across the terminal. These configurations support individual travellers, families, and groups, while the customised durable PU seating ensures comfort, hygiene, and ease of cleaning in a high-traffic environment, contributing to a consistently high standard of presentation.

The Zoefftig Vista seating system enhances the overall passenger experience through its ergonomic design, generous seat proportions, and integrated power solutions. Its modular and flexible layout allows the terminal to adapt to changing operational requirements while maintaining a cohesive aesthetic. Together, these features create a welcoming, efficient, and future-ready seating environment that supports passenger wellbeing and reinforces HKIA's commitment to world-class service standards.
